

# Geotechnics and Civil Engineering

Experts in advanced construction

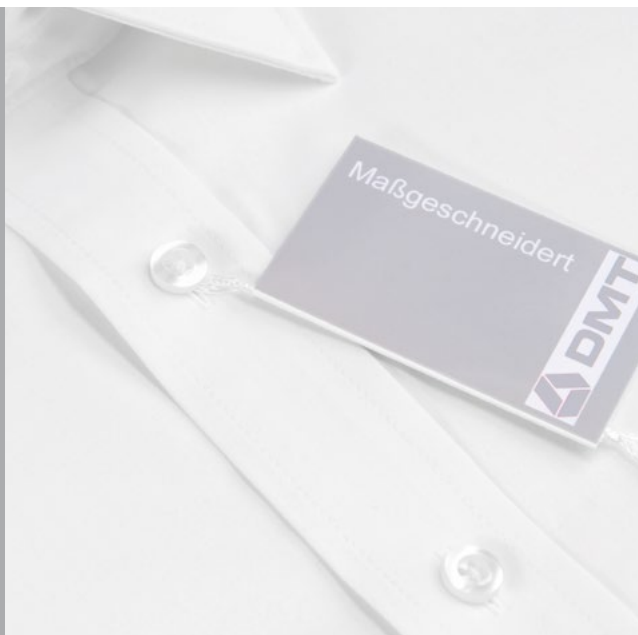

## Everything in view

Foundation engineering is an area where reliability and precision are of vital importance. This applies not only to the best possible choice of equipment but also to the most suitable work procedures and methods in process engineering. In order to provide the highest levels of reliability and safety in this demanding area, DMT provides full-scale services that encompass all stages of planning and support for the advanced tasks of foundation engineering and geotechnics.

### We offer:

- Holistic view on projects
- High level of design dependability
- Many years of experience in design and execution
- Schedule and cost management for projects
- A trusting, cooperative partnership with all project participants

## Lasting success for all aspects of your construction project

### Planning stage

- Subsoil analysis in preparation for construction
- Holistic view on projects
- Feasibility studies for deployed technologies and process engineering
- Identification and evaluation of risks
- Evaluation and optimisation of interactions between work groups
- Design planning and implementation planning
- Determination of material volumes
- Full-scale services for the conception and budgeting of excavation, foundation, drainage and earth works
- Schedule forecasting

Our qualified technical experts will be at your disposal throughout, guiding and supporting your project with their in-depth knowledge.

# Proven expertise and extensive experience

## Tendering and contracting stage

- Expert compilation of tender documents
- Advice on the selection of subcontractors
- Examination of bids
- Assessment of special proposals
- Support during contract negotiations as well as completion thereof
- Contract drafting

Our experts have many years of practical experience in planning and implementation, providing you with superior reliability when making crucial project decisions.

## Project management to ensure successful completion

### Implementation stage

- Construction and project management
- Site supervision
- Coordination of work groups and interfaces
- Schedule management
- Service approvals and quality assurance
- Budget management and billing
- Contract and claim management

You will be kept up-to-date on the project's progress and receive transparent cost updates at all stages.
